

SCOOP THE CUB REPORTER

Beware the Anger of a Patient Police Reporter "By Hop"

GOVERNMENT FINDS POTASH AT COLUMBUS

VALUABLE MINERAL DISCOVERED ONLY A FEW MILES FROM TONOPAH

In searching for a domestic source of potash in the United States, the geological survey has explored more or less thoroughly a number of the desert basins in the west. Among the regions investigated is the mud flat known as Columbus marsh, which lies a few miles southwest of Coaldale and near Tonopah, and has an area of about 35 square miles. Nine shallow wells have been sunk in this marsh and the borings and waters have been examined for potash. Though commercial quantities of potash were not found and no saline beds were encountered, the data obtained in the exploration, like much of the survey work, have a scientific value. A more extensive chemical study has been made of the muds from one of the wells by W. B. Hicks, and the results are given in a recent survey publication—"Composition of Muds from Columbus Marsh, Nev."—issued as Professional Paper 95-A. This report shows that the muds contain a high percentage of potassium, only a small part of which, however, is soluble in water. The results of the chemical study indicate further that a large part of the potassium in the muds has been absorbed from solution and is held in a loosely combined form. This condition may account for the apparent disappearance of the potassium from the salines of the desert-basin region, and should have a bearing on future exploration for potash.

A copy of the publication, which is technical in character, may be obtained free on application to the director of the geological survey, Washington, D. C.

CLEAN-UP DAY POSTPONED

A visitor to Hawthorne remarked yesterday that the residents were not responding to Governor Boyle's proclamation making this clean-up week.

SCIENTISTS RESPOND TO DISTRESS CALL

LARGE AMOUNT COLLECTED AND DISBURSED FOR RELIEF

In response to the call for contributions for the relief of Christian Scientists in distress by reason of the present war in Europe, the sum of \$82,104.02 has been received by the treasurer of The Mother Church. Of this amount \$77,595.51 has been disbursed to the relief committees organized by Mr. McCrackan in England, Germany, France and Switzerland, as called for by them. Much gratitude has been expressed by the Christian Scientists in these countries for the help extended to them by their brethren in America.

In addition to the \$82,104.02 collected for the relief of Christian Scientists, there has also been collected the sum of \$29,154.90 for the relief of war sufferers other than Christian Scientists. This entire amount has been disbursed by relief committees of Christian Scientists in Holland, England, Germany, France and Switzerland. The total amount received to date for these two funds is \$111,258.92, of which but \$4,508.31 remains unexpended. As the need for help still continues, this small balance will not last long; therefore Christian Scientists are given the opportunity to continue to send contributions to the treasurer of The Mother Church for this relief work. For the future it is proposed to maintain but one fund, and from this both Christian Scientists and others will be assisted.

He was promptly informed that we had postponed the date to June 1st, at which time the bathing season opens at Walker lake.—Bulletin.

SOME WHEAT

Henry Rice brought in samples of wheat four feet high and says he has ten acres at Logan just like it. Alfalfa is ready to cut, in some places standing over two feet high.—Las Vegas Age.

RANGE FEED WILL BE PLENTIFUL THIS YEAR

DISTRIBUTION AND AMOUNT OF PRECIPITATION ASSURE VEGETATION

The hillside in the vicinity of Tonopah are becoming lawnlake with the bunch grass that has sprung up within the past few days. Range feed will be more plentiful than in years and the wild flowers will bloom abundantly. It is reported from Smoky valley, Duckwater, Currant creek and other portions of the county that the mountains are deeply covered with snow, which has drifted into the canyons where it will be protected against the sun, assuring an abundance of water for agricultural and placer mining.
